

EXCELLENCE IN EQUINE NUTRITION

TUFFOAL

**THE MAINTENANCE OF NORMAL GUT MOTILITY
IN FOALS, WEANLINGS & HORSES**

TUFFOAL contains Kaolinitic Clays and Pectin for the maintenance of gut motility, Fructo oligosaccharides to stimulate beneficial bacteria in the gastro intestinal system, and electrolytes.

■ KAOLININITIC CLAY

Will work to slow down gut motility and binds with water. A study by *PIESZKA et al*, concluded that feeding foals maintained on different stud farms with a kaolin paste reduced the duration of abnormal gut motility.

■ FRUCTO-OLIGOSACCHARIDES (FOS)

High levels of FOS (8g/dose) can increase the population of 'good' bacteria in the colon while by competitive exclusion reduce the number of harmful bacteria.

■ PECTIN

A dietary fibre and energy source for cells in the gastrointestinal wall. Stimulates water and colonic sodium retention – important in helping to produce normal stools.

■ SODIUM CHLORIDE, POTASSIUM CHLORIDE, MAGNESIUM SULPHATE

Replaces essential electrolytes lost for quicker recovery.

■ GLYCINE

An amino acid that is a precursor of powerful antioxidants (creatine, porphyrins, glutathione) as well as having the ability to increase electrolyte absorption for rapid results.

INSTRUCTIONS FOR PROPER USE:

Pour the required amount into the measuring cup supplied with the container, fill into a clean dosing syringe and either add to the normal feed ration, or feed directly to the horse.

Foals and Weanlings: 40ml. twice daily. - **Adult Horses:** 60ml. twice daily.

Composition: Fructo oligosaccharides, Sodium Chloride, Potassium Chloride, Magnesium Sulphate, Pectin, Calcium Gluconate.

Additives	per 40ml.	per 60ml.
Kaolinitic Clay	4,132mg	6,198mg
Glycine	836mg	1,254mg

Analytical constituents: Crude Protein 2.3%, Crude Oils & Fats <0.3%, Crude Fibre 0.2%, Crude Ash 12.3%, Sodium 1.11%, Moisture 62.8%.
